ST. XAVIER'S COLLEGE, MUMBAI

## Syllabus for B.Sc I<sup>st</sup> Semester Courses in Geology (June 2019 onwards)

### **Contents:**

- Theory Syllabus for Courses:
  - SGEO0101 Introduction to Mineralogy and Crystallography
  - SGEO0102 Introduction To Earth Science, Cartography and Structural Geology.
- Practical Course Syllabus for: SGEO01PR.
- Evaluation and Assessment guidelines.

#### F.Y. B.Sc. Geology

**Title: Introduction To Mineralogy and Crystallography** 

#### Learning Objectives:

This is among the first exposure that a learner has to the subject of geology at the undergraduate level. The aim of this course is to develop in the learner, ability to understand and identify various minerals along with their characteristic crystallographic properties, as this forms one of the fundamental requirements in the later profession.

#### Number of lectures: 45

#### <u>Unit 1</u>

**Mineralogy:** 

Chemical bonds and formation of compounds.

Minerals: definition, chemical compositions and classification.

Physical properties of minerals: colour, streak, luster, diaphaneity, form, habit, cleavage, fracture, hardness, specific gravity, and electrical and magnetic properties.

Isomorphism, polymorphism and pseudomorphism.

#### <u>Unit 2</u>

#### **Elementary Crystallography:**

States of matter: crystalline state.

Elementary ideas about the crystal structure.

External characteristics of crystals: face, form, edge, solid angle, interfacial angle and its measurement, zone.

Crystal symmetry: planes, axes and center of symmetry.

Crystallographic axes and axial angles, parameters, indices and rational indices.

Classification of crystals into seven systems.

Study of the normal classes belonging to following systems:

Isometric, Tetragonal, Hexagonal, Trigonal, Orthorhombic, Monoclinic and Triclinic.

#### <u>Unit 3</u>

Descriptive Mineralogy of Rock forming minerals:(15 Lectures)Structural classification of silicates.Feldspars, Silica, Pyroxene, Amphibole, Mica, Olivine.

#### List Of Recommended Reference Books

- 1. Dana J.D. and Ford W.E. (rev.ed.) (2010), Dana's Manual of Mineralogy, J. Wiley & Sons.
- Read H.H. (Rev. ed. C.D. Gribble) (1988), Rutley's Elements of Mineralogy" (27<sup>TH</sup> Edition), CBS Publications.
- 3. Perkins D (2010). Mineralogy (3<sup>rd</sup> Edition), Prentice-Hall of India.

#### **Practical Course:**

- I. Study of crystal models representing forms of seven normal classes of symmetry.
- II. Identification and description of the physical properties, composition, occurrences and uses of 30 rock forming minerals.

**Course: SGE00101** 

(15 Lectures)

(15 Lectures)

#### F.Y. B.Sc. Geology

Title: Introduction To Earth Science, Cartography And Structural Geology

#### Learning Objectives:

The primary platform for any learner attempting to understand geology is our planet earth. As this course is among the introductory courses at the undergraduate level, it needs to communicate and also attempt at the learner becoming acquainted with the various theories about the origin of the universe and our solar system. After that the learner needs to know the theories that lead to the understanding about the planets interior and the energy systems that drive the various internal (sub-surface and deep interior) systems along with the linkages between the interior and the atmospheric circulation. This leads to an understanding about the internal and external processes on our planet and how various structures within rocks form due to earth's internal forces.

#### Number of lectures: 45

<u>Unit-1:</u>

#### Lectures

#### Earth in the Solar System:

Geology and its perspectives.

Earth in the Solar System: Earth's Origin, size, shape, mass, density, rotational parameters. **Earth's Internal structure**: core, mantle, and crust.

Hydrosphere, Atmosphere and Biosphere: characteristics and elemental abundance in each constituent. Convection in the earth's core and production of its magnetic field. Age of the earth.

#### Unit-2:

#### Lectures

#### Atmospheric circulation and Global climatic changes:

Atmospheric circulation, weather and climate changes.

Land-air-sea interaction.

Earth's heat budget and global climatic changes.

#### Ocean currents:

Generation of oceanic currents, surface currents and global ocean conveyor system.

Ocean as a thermostat for the earth's surface heat balance.

#### **Cartography:**

Maps and Topographical maps; latitude – longitude concepts, Datum, map projections, types of maps, SOI map index, Contours and contour reading: Scales and Compass bearings, map grids (UTM).

#### Unit-3:

#### **Structural Geology:**

Stratification; Dip and Strike; Clinometer compass its use.

Outcrop pattern of horizontal, dipping and vertical strata on various types of topography. Outliers, Inliers.

Folds: Definition, Morphology, anticline and syncline.

Types of folds: symmetrical, asymmetrical, recumbent, overturned, isoclinal, plunging, doubly plunging, structural dome and basin, monocline, structural terrace, chevron, fan, anticlinorium, synclinorium, Importance of folds.

#### 15

15

**Course: SGEO0102** 

#### **15 Lectures**

Joints: Definition, geometric classification and importance.

Faults: morphology; geometric classification based on relation to affected rocks, angle of dip, apparent movement and relative movement; distributive faulting: horst, graben and step faults; nappes.

Unconformities: nature, types and importance; overlap and off-lap.

#### List Of Recommended Reference Books

- 1. Compton R.R. (1985), Geology in The Field., J. Wiley& Sons
- 2. Skinner B.J., Porter S.C. and Botkin D.B. (1999), The Blue Planet., 2nd edn. J. Wiley & Sons.
- 3. Holmes A. (1993), Principles of Physical Geology., ed by David Duff, Nelson Thornes Ltd
- 4. Billings M.P. (1987), Structural Geology., 3rd edn, Prentice-Hall, India Pvt. Ltd
- 5. Robinson. A, Morrison. J, Muehrcke. P, Kimerling. A, Guptill. S (1995), Elements of Cartography, 6 ed, J. Wiley & Sons.
- 6. Siddhartha K., (1999), Oceanography A Brief Introduction., Kisalaya Publn., India
- 7. Butz S. (2007) Science of Earth Systems., 2nd edn., Thomas Delmar.

#### **Practical Course:**

- I. Use of Clinometer and Brunton compasses
- II. Description and drawing of vertical cross section of simple geological maps involving horizontal or dipping strata with vertical faults, folded (non-plunging and non-faulted) strata and strata involving angular unconformity.
- III. Graphical solution of structural geology problems involving
  - a. Strike, true dip and apparent dip
  - b. Thickness and width of outcrop.

#### **Evaluation and Assessment: SGEO0101 and 102 courses**

#### **Evaluation (Theory): Total marks per course - 100.**

#### Continuous Internal Assessment (CIA) - 40 marks

CIA 1: Written test -20 marks

CIA 2: One day Geological Field work around Mumbai with field report and viva on the fieldwork. -20 marks

#### **End Semester Examination – 60 marks**

One question from each unit for 20 marks, with internal choice. Total marks per question with choice -28 to 30.

#### **Evaluation of SGEO01PR (Practicals) Total marks for Practical course - 100.**

####

## Syllabus for BSc II<sup>nd</sup> Semester Courses in Geology (November 2019 onwards)

### **Contents:**

- Theory Syllabus for Courses:
  - SGEO0201-Introduction to Petrology, Geotectonics and Economic Geology.
  - SGEO0202-Introduction to Physical Geology, Principles of Stratigraphy and Paleontology.
- Practical Course Syllabus for: SGEO02PR.
- Evaluation and Assessment guidelines.

#### F.Y. B.Sc. Geology Title: Introduction to Petrology, Geotectonics and Economic Geology

**Learning Objectives:** As a part of the four formative courses which introduce the learner to the basics of geology, this module incorporates the necessary topics to appreciate and understand the processes which lead to the formation of various rock types and mineral deposits along with their relationship to tectonism. A brief understanding of the methods of exploration and exploitation of earth's natural resources is also discussed.

#### Number of lectures: 45

#### Unit 1

#### **Igneous Petrology**

Rocks: definition, their classification.

Magma: definition, composition, origin, Bowen's Reaction Series, magmatic differentiation and assimilation.

Mode of occurrences, Intrusive and Extrusive forms.

Textures and structures.

Classification based on grain size and mineral composition.

#### **Metamorphic Petrology**

Metamorphism: definition, agents and types of metamorphism.

Metamorphic minerals: stress and anti-stress minerals, textures and structures.

Metamorphic facies and isograds, Relationship between metamorphism and deformation. Rock cycle.

#### Unit 2

#### **Sedimentary Petrology** •

Sediments: weathering, transport, deposition, consolidation, diagenesis.

Textures and structures.

Classification: Terrigenous and Chemical sedimentary rocks.

#### **Mineral Deposits**

Classification and brief study of following mineral deposits: Hydrothermal, Magmatic, Sedimentary (evaporites, strata-bound, bedded iron formations), Placer, Residual.

#### Unit 3

#### **Introduction to Mineral Exploration and Mining:**

Methods of mineral exploration: Surface methods - grid sampling. Sub-surface methods -Seismic, Electrical, Magnetic and Electrical.

Basic ideas about the methods of mining.

#### • **Geotectonics:**

Earthquakes: causes, effects, tsunamis, measurement of earthquakes, seismic belts, seismic zonation in India.

Volcanoes: types, causes and distribution.

Origin of Mountains, Oceans and Continents.

General relief features of the ocean floor.

#### (15 lectures)

#### (15 lectures)

#### (15 lectures)

### **Course: SGEO0201**

#### List Of Recommended Reference Books

- 1. Ehlers, E.G. and H. Blatt (1982), Petrology, Igneous, Sedimentary and Metamorphic, W.H Freeman, San Francisco
- 2. Tyrell G.W. (1980), Principles of Petrology: An Introduction to the Science of Rocks., 1st Indian Edn., B.I. Publn. India.
- 3. Ramam P.K. (1989), Principles and Practices of Mineral Exploration., Publ. Geol. Soc. Ind.
- 4. Arogyaswami R.N.P. (1973), Courses in Mining Geology., Oxford & IBH
- 5. Agoskhov M., Borisov S., Layansky V. (1888), Mining of Ores and Non-metallic Minerals., Mir Publishers

#### **Practicals**

- I. Identification of group characteristics of 25 common rocks and their classification into major rock groups. Identification and systematic description of the megascopic features of these rocks.
- II. Identification and description of the physical properties, composition, occurrences of 10 commonly occurring economic ore minerals.

#### F.Y. B.Sc. Geology Title: Introduction to Physical Geology, Principles of Stratigraphy and Paleontology

#### **Learning Objectives:**

As the fourth module in the introductory courses in geology, the learner is exposed to the now accepted modern day concept of plate tectonics, which also explains the various surface features on our planet. The learner develops an understanding about the various surface phenomenon that lead to the development of soild and the breakdown of landforms. The last unit in this module introduces the learner to the basics of stratigraphy, whereby the concept of age related geological activities which shaped our planet are explained. Also explained is the basis of formation of fossils.

#### Number of lectures: 45

#### **Unit 1 Introduction to Plate Tectonics and Physical Geology**

Theory of Plate Tectonics and its proofs.

Introduction to Weathering and Erosion; Exogenic and endogenic geomorphic processes; Evolution of landscape.

Soil: definition, formation and functions; soil profile.

#### **Unit 2 Landforms**

Wind: erosion, transport and deposition; Aeolian landforms.

Rivers: development of a typical river system; erosion, transportation and deposition; Fluvial landforms

Glaciers: types, formation and morphology; erosion, transport and deposition; Glacial landforms.

Oceans: marine erosion and deposition; Coastal landforms.

#### **Unit 3 Introduction to Principles of Stratigraphy and Paleontology** (15 Lectures) Definition of stratigraphy. Nature of stratigraphic records.

Principles of Stratigraphy-superposition, initial horizontality, lateral continuity, floral and faunal succession, cross-cutting relationship, and uniformitarianism. Types of stratigraphic classification in brief.

Concept of time in geology. Geological time scale. Major events of mass extinction. Unconformities- types, formation and applications.

Introduction to paleontology. Fossils- definition, types of fossils, modes of preservation. Collection of fossils. Introduction to common fossils. Applications of fossils in geology.

#### **List Of Recommended Reference Books**

- 1. Benton M.J. and Harper D.A.T. (2009), Introduction to Paleobiology and Fossil Record, Wilev-Blackwell Publication.
- 2. Ray Anis. K, (2008), Fossils in Earth Sciences, Prentice Hall of India
- 3. Butz S. (2007) Science of Earth Systems., (2<sup>nd</sup> Edition), Thomas Delmar.

- 8. Emiliani C. (1992), Planet Earth: cosmology, geology and evolution of life and environment, Cambridge University Press.
- 9. Weller J.M. (1960), Stratigraphic Principles and Practice, Harper.

#### Practicals

- 1. Worksheets for the study of various landforms
- 2. Study of 3D models of the various landforms formed due to the geomorphic processes.
- 3. Chronostratigraphy of events of deposition for given geological cross section.
- 4. Introduction to standard symbols used to construct lithologs
- 5. Preparation and Correlation of the lithologs, and their interpretations.
- 6. Mode of preservation of fossils

#### Evaluation and Assessment: SGEO0201 and 202 courses

#### **Evaluation (Theory): Total marks per course - 100.**

#### **Continuous Internal Assessment (CIA) - 40 marks**

CIA 1: Written test -20 marks

CIA 2: One day Geological Field work around Mumbai with field report and on the fieldwork. -20 marks

**End Semester Examination – 60 marks**

## Syllabus for B.Sc III<sup>rd</sup> Semester Courses in Geology (June 2019 onwards)

Contents:

- Theory Syllabus for Courses:
  - o SGEO0301 Stratigraphy, General and Invertebrate Paleontology
  - SGEO0302 Crystallography
  - o SGEO0303 Geomorphology and Cartographic Analysis
- Practical Course Syllabus for: SGEO03PR
- Evaluation and Assessment guidelines.

#### S.Y. B.Sc. Geology Title: Stratigraphy, General and Invertebrate Palaeontology

Learning Objectives: Among the first of the core courses, developed keeping in mind the needs of a professional geologist and a learner who is likely to pursue his career in the subject, this course communicates the basis of stratigraphy and correlation of strata among rock sequences. The correlation between the rocks and the evolving life on our planet is dealt with in two units. They specifically deal with the characteristic features, origin, evolution and preservation of life in sedimentary rocks.

#### Number of lectures: 45

#### **<u>Unit 1</u>** Stratigraphy

Stratigraphic classification & nomenclature, study of stratigraphic elements, Stratigraphic Units: lithostratigraphic, geochronologic, chronostratigraphic and biostratigraphic. Concept of biozones and applications of biostratigraphic units. Walther's law of facies and its application in the field. Introduction to basic concepts of sequence stratigraphy.

#### Unit 2 Paleontology - I

Modern concept of origin of life, principles and theories of evolution, mechanism & pattern of evolution; causes of migration, dispersal and extinction of organisms,

Introduction to paleontology, Potential and preservation of fossils, Types and applications of fossils

Taphonomy

Study of functional morphology and evolutionary trends of:

-Trilobite

-Brachiopoda

Importance of Dinosaur fossils in India

Evolution of Horse and Elephant.

#### **Unit 3 Paleontology-II**

Study of functional morphology and evolutionary trends of:

-Mollusca: Pelecypoda, Gastropoda, and Cephalopods

-Corals

-Echinoidea

-Graptololoidea

Ichnofossils: introduction, types and applications in paleoenvironmental interpretation.

### **Course: SGE00301**

(15 lectures)

#### (15 lectures)

#### (15 lectures)

- 8. Raup D. and Stanley S.M. (1971), Principles of Paleontology, W.H. Freeman.
- 9. Shrock Robert R. and Twenhofel William H. (1953), Principles of Invertebrate Paleontology, McGraw Hill Co., New York.
- 10. Spencer E.W. (1962), Basic Concepts of Historical Geology, Thomas Y. Crowell, New York.
- 11. Weller J.M. (1960), Stratigraphic Principles and Practice, Harper.
- 12. Woods H (1958), Paleontology-Invertebrate, University Press London.

#### **Practicals**

1. Identification (morphology, classification, and geological distribution) and study of evolutionary trends of: trilobite, brachiopods, lamellibranches, gastropods, cephalopods, echinoids, and graptolites.

- 2. Identification and interpretation of biozones in stratigraphy.
- 3. Introduction to the identification of micro fossils.

#### S.Y. B.Sc. Geology Title: Crystallography

#### Learning Objectives:

The aim of the course is to communicate and facilitate the understanding of concepts of crystal structures, symmetry and point groups. The course is also aimed to relate the application of crystallography in various fields with special emphasis on mineralogy. This course becomes the prerequisite to advanced level (SGEO05.0 courses) in petrology and gemology.

#### Number of lectures: 45

#### <u>Unit 1</u>:

#### **Characteristic of Crystals:**

Atomic arrangement in crystals, Bravais Lattices, Crystal symmetry, Elements of symmetry: Planes, Axes and Centre, Axis of inversion symmetry, Crystallographic axes, Miller Indices, Axial ratios, Classification of crystals, Stereographic projections of symmetry, Graphical symbols used in stereographic illustrations.

#### <u>Unit 2</u>:

### The thirty-two crystal classes and possible forms of each class(15 Lectures)Forms and crystal morphology, Name of forms, Illustration and description of forms, open

forms and crystal morphology, Name of forms, illustration and description of forms, open forms and closed forms, point groups and crystal systems, Derivation of 32 classes of symmetry with Hermann-Mauguin symbols, Characteristic symmetry, and relationships between crystal axes and symmetry notation of crystal systems.

#### <u>Unit 3</u>:

#### X-ray Diffraction and Crystal imperfections

# Twin crystals, Twin axis, Twin plane, Composition plane. Types of Twinning: Simple and Multiple contact twins, Simple and Multiple penetration twins, Cyclic twins, Twinning in Feldspars: Carlsbad, Manebech, Baveno, Albite, Albite-Carlsbad.

X-ray Diffraction: Brief introduction of X-rays, Diffraction effects and Bragg equation, Application of X-rays in crystallography and mineralogy.

#### List Of Recommended Reference Books

- g. Shelly David (1985), Optical Mineralogy (2<sup>nd</sup> Edition), Elsevier.

#### Course: SGE00302

(15 lectures)

(15 Lectures)

- h. Nesse W.D. and Schulze D.J. (2004), Introduction to Optical Mineralogy" (Third Edition) and An Atlas of Minerals in Thin Section, Oxford University Press.
- i. Perkins Dexter (2011), Mineralogy (International Edition), Pearson Education.
- j. Wenk H.R. and Bulakh A. (2004), Minerals: their constitution and origin, Cambridge University Press.

#### **Practicals:**

Study of Symmetry: Symmetry elements of 32 classes of symmetry

Stereographic projections of Symmetry elements of 32 classes of symmetryStudy of 48 possible forms in crystallography with special emphasis on crystals belonging to the following Fourteen classes of symmetry:

Cubic system: galena, tetrahedrite & pyrite classes

Tetragonal system: zircon, chalcopyrite, nickel sulfate classes

Hexagonal system: beryl, apatite & beta- quartz classes.

Trigonal system: calcite, tourmaline and alpha- quartz classes.

Orthorhombic system: barite class.

Monoclinic system: gypsum class.

Triclinic system: axinite class.

Study of Twin-axis, Twin plane and composition plane of the following types of Twin crystals: Simple contact twinning: Spinel, Rutile, Aragonite, Gypsum, Augite, Orthoclase (Bavano, Manebach, Carlsbad).

Simple penetration twinning: Staurolite, Augite, Orthoclase (Carlsbad-partially penetrant). Multiple contact twinning: Albite.

Multiple penetration twinning: Fluorite, Diamond (Star), Chrysoberyl (Wheel).

Multiple cyclic twinning: Aragonite, Chrysoberyl (Wheel).

#### S.Y. B.Sc. Geology Title: Geomorphology and Cartographic Analysis

#### Learning Objectives:

**Understanding of -**

- Concepts of Geomorphology & Cartography
- Types & Origin of Landforms
- Cartographic Techniques, their applications & interpretations

#### Number of lectures: 45

#### <u>Unit 1:</u>

#### **Concepts of Geomorphology:**

Energy for landform change, methods of dating. Geomorphic Systems: people as Geomorphic Agents, People as creators of Landforms.

#### **Structure controlled Landforms:**

Landforms controlled by various structures like faults and folds and resulting peculiarities of drainage patterns

#### Volcanogenic landforms :

Energy of volcanic eruptions, Products of Volcano, Types of Volcanoes, Types of Eruptions, Landforms produced by Erosion of Volcanic features

#### Landforms controlled by predominantly Weathering process:

Landforms produced by weathering and the various processes that lead to the formation of Corestones, Tors, Pits, Pans, Caverns, Rills, Duricrust.

#### Landforms resulting from fluvial processes:

Concept of Fluvial Transport and Deposition, Formation of Alluvial Fans, Floodplains and Terraces, Alluvial river channels, Alluvial Bars, Braided Channels, Straight and Meandering Channels.

#### <u>Unit 2:</u>

changes.

#### **Eolian Processes and Landforms:**

Landforms resulting from Eolian Erosion, Transport and Deposition.

#### **Coastal Processes and resulting Landforms:**

Erosional landforms of the coast. Depositional landforms of the coast. Influence of Current rates of Erosion, Climatic influences past and present, Sea level

#### Karst Processes and resulting Landforms:

Limestone Solution and erosion rates.

Surface landforms in karst terrain, Minor solution Sculpture, Enclosed Depressions. Karst landforms of fluvial erosion, Underground water, caves and springs.

#### **Glaciers and resulting Landforms:**

#### Course: SGE00303

#### (15 lectures)

(15 lectures)

Ice Movement, Flow patterns, Forms of Glacier surfaces, Erosional and depositional landforms.

#### <u>Unit 3:</u>

#### (15 lectures)

#### **Topographic Analysis:**

Topographical profiles, Projected profiles, Superimposed profiles, Spur Profiles, Cross Valley Profiles, Geomorphological Mapping Using I.G.U symbols.

#### **Slope Analysis:**

Morphological Mapping by Savigear's Method. Average Slope Map, Generalized Contour Map.

#### **Drainage Basin Analysis:**

Drainage Basin as a Unit of Study. Discharge of Water from a Watershed, Hydrograph Shapes, Flood Frequency, Patterns of Discharge. Drainage basin morphometry – Linear and areal aspects.

## Syllabus for B.Sc IV<sup>th</sup> Semester Courses in Geology (November 2019 onwards)

Contents:

- Theory Syllabus for Courses:
- SGEO0401 Economic Geology
- SGEO0402 Optical mineralogy and Systematic Mineralogy
- SGEO0403 Field Geology and Hydrogeology
- Practical Course Syllabus for SGEO04PR

# Learning Objectives: To understand the fundamentals processes involved in the

formation and distribution of various ore deposits.

#### Number of lectures: 45

S.Y. B.Sc. Geology

**Title: Economic Geology** 

<u>Unit 1</u>

#### Introduction to economic mineral deposits

Introduction, definition of metalliferous and non-metalliferous deposits, ore mineral, gangue, tenor of ore, industial minerals, overburden and country rock.

Classification of economically important metalliferous and non-metalliferous mineral deposits. Stratabound and stratiform ore deposits.

Structural and stratigraphic controls on mineralization, metallogenic epochs and provinces. **Ore genesis -I** 

Processes of formation of mineral deposits.

Magmatic concentration (early and late magmatic mineral deposits)

Sublimation and pegmatitic deposits

#### <u>Unit 2</u> Ore genesis -II

Hydrothermal processes, cavity filling and metasomatism:

Hydrothermal processes: Principle, character of solution, types of openings in rocks, factors affecting deposition from hydrothermal solutions, wall rock alterations.

Cavity filling deposits: processes of formation and characteristic features of: fissure veins and its types (in brief), stock work, saddle veins, ladder veins, pitches and flats, breccia filling deposits, solution cavity fillings.

Contact Metasomatic Deposits: definition, criteria of replacement, resulting mineral deposits. Sedimentation deposits, Metamorphic deposits

#### <u>Unit 3</u>

#### Ore genesis - III

Evaporation deposits: brief account of non-metallic deposits of ocean water, lake water, ground water and hot springs.

Residual deposits: conditions favouring formation of residual deposits.

Mechanical concentration: principles and processes of formation of placer deposits (eluvial, alluvial, beach and aeolian).

Oxidation and solution in the zone of oxidation, ore deposits in the zone of oxidation.

Supergene sulphide enrichment: requirements for supergene sulphide deposition, recognition of sulphide enrichment. Gossans and cappings, role of iron gossans, limonite and false gossans.

#### (15 lectures)

(15 lectures)

#### Course: SGE00401

(15 lectures)

#### List of recommended reference books

- 1. Jensen M.R. and Bateman A.M. (1981), Economic mineral deposits, John Wiley & Sons.
- 2. Evans A.M. (1993), Ore geology and Industrial minerals, Blackwell Science.
- 3. Prasad U. (2000), Economic Geology Economic Mineral Deposits, 2nd ed., CBS, India.
- 4. Jill R. (2015), Chemical Fundamentals of Geology and Environmental Geoscience, Wiley Blackwell. (for practicals)

#### **Practicals**

Identification (with the help of physical properties), chemical composition, origin and Indian occurrences of Ore minerals and Industrial minerals of following minerals.

	Ilmenite
Barite	Kyanite
Bauxite	Limonite
Biotite	Magnesite
Calcite	Magnetite
Chalcopyrite	Malachite
Chromite	Marble
Cuprite	Muscovite
Dolomite	Psilomelane
Fluorite	Pyrite
Galena	Pyrolusite
Garnet	Serpentine
Graphite	Sphalerite
Gypsum	Stibnite
Hematite	Talc
	Tourmaline

#### **Distribution of mineral deposits**

Formation, association and Indian distribution of following ore minerals: Mica, Copper, Manganese, Lead and Zinc, Bauxite, Chromite, Gold

#### Numerical on Ore reserve estimation

#### S.Y. B.Sc. Geology

**Title: Optical Mineralogy and Systematic Mineralogy** 

#### Learning Objectives:

To introduce the basic concept needed to understand the optical mineralogy and to learn the physical and optical properties and characteristics of common rock forming minerals.

#### Number of lectures: 45

#### <u>Unit 1</u>

#### **Optical Properties of Minerals:**

Nature and behaviour of light: Non-polarised and Polarised light, Refraction and Refractive index, Double refraction, Nicol prism and Filter poloroid, Isotropic and Anisotropic substances, Polarizing Microscope: Its Construction and Working.

Optical characteristics: Relief, Becke's test, Twinkling, Pleochroism, Birefringence, Polarization colours, Newton's scale, Extinction and Extinction angle, Anomalous polarization colours, Uniaxial and Biaxial minerals, Optical indicatrix, Interference figures, Optic sign, Sign of elongation, Use of Quartz wedge, Mica plate and Gypsum plate.

#### <u>Unit 2</u>

#### Systematic Mineralogy: part I

Stability relationships, Condition of formation, Crystallography, Physical and optical properties, Composition and structure, Diagnostic Features, Occurrence and Uses of: Silica Group Feldspar Group Feldspathoid Group Mica Group

#### <u>Unit 3</u>

#### Systematic Mineralogy: part II

Stability relationships, Condition of formation, Crystallography, Physical and optical properties, Composition and structure, Diagnostic Features, Occurrence and Uses of: Amphibole Group Pyroxene Group

Olivine Group Garnet Group Zeolite Group Clay minerals

- t. Wenk H.R. and Bulakh A. (2004), Minerals: their constitution and origin, Cambridge University Press.

#### **Practicals:**

#### Mineralogy:

Study of Physical and Optical characters, mode of formation and occurrence in Rock types of the following :

**Igneous rock forming minerals:** Quartz, Orthoclase, Microcline, Albite, Labradorite, Leucite, Nepheline, Sodalite, Muscovite, Biotite, Hornblende, Augite, Aegirine, Hypersthene, Olivine, Tourmaline and Apatite.

**Metamorphic rock forming minerals**: Garnet, Staurolite, Chlorite, Talc, Serpentine, Actinolite, Tremolite, Anthophyllite, Epidote, Andalusite, Kyanite, Sillimanite, Calcite, Dolomite, Asbestos, Chrysolite, Magnesite.

Study of Physical properties, mode of occurrence and conditions of origin of the following Secondary minerals: Quartz (Rock crystal), Amethyst, Calcite (Rhombohedral, Scalenohedral & Nail-head spar), Stilbite, Scolecite, Mesolite, Chabazite, Laumontite, Apophyllite (Prismatic & Pyramidal), Gyrolite and Okenite.

#### S.Y. B.Sc. Geology

Title: Field Geology and Hydrogeology

#### Learning Objectives:

Understanding of construction & working of field equipment, Outcrops observations, measurements, recordings & interpretations and Hydro geological concepts, exploration, exploitation & recharge of groundwater.

#### Number of lectures: 45

#### <u>Unit 1</u>

#### Nature of Geologic Surveying:

Uses of geologic surveying, Diversity of Surveys, Scope of geological field-work.

Study of Outcrops, Importance of Contacts and Discrimination between different types of contacts. Discrimination of Strike and Dip.

Topographical Maps (SOI) - Map Index and Map Scale, Map folding, map reading. Study of Geological Maps and understanding Map Symbols.

Field Observations: Schedule for Field Observations. General Suggestions for Field work: Beginning a field problem. Collecting and trimming samples. Taking photographs.

#### Data recording and mapping in various terrains

Lava flow mapping- Mapping in igneous terrains Field observations of sedimentary rocks Data recording for structurally complicated terrains- foliations and lineations

#### **Methods of Geologic Mapping:**

Method of reconnaissance mapping – Contact mapping on topographical map, Tape and Compass, Detailed geological mapping using Plane Table survey.

Mapping of horizontal contacts using Altimeter: Its construction and use.

#### <u>Unit 2</u>

#### **Ground Water:**

Definition, Utilisation, Hydrogeologic Cycle, Subsurface movement of water, Zones of Groundwater. Definition of Watertable. Types of Aquifers. Presentation of Water Level data on Maps and Graphs. Natural and Artificial Discharge of Groundwater. Springs.

#### **Occurrence of Groundwater:**

Origin of groundwater. Rock properties affecting groundwater. Vertical distribution of groundwater. Geological formations as aquifers.

#### **Groundwater Movement:**

Darcy's Law, Coefficient of permeability. Groundwater flow rate. Laboratory and field measurements of permeability. Tracing groundwater movements. Groundwater flow-lines and flow-nets.

#### <u>Unit 3</u>

#### Surface Investigations for Groundwater:

Conventional methods – surface indicators of ground water, biological indicators , Test-drilling.

### (15 lectures)

#### (15 Lectures)

#### Page 28 of 62

(15 lectures)

#### Course: SGE00403

#### Geophysical log in ground water exploration:

Resistivity logging, Potential logging, Temperature logging.

#### Geophysical exploration for ground water:

Resistivity method and Seismic method.

#### Ground water recharge:

Artificial Recharge of Groundwater: Concept. Methods. Water Spreading, rain water harvesting.

Waste water reused. Recharge mounds. Induced recharge.

- 7. Bouwer H. (1978), Groundwater Hydrology., McGraw-Hill
- 8. Chorley R.J. (ed) (1969), Introduction to Geographical Hydrology., Metheun.

#### **Practicals:**

Calculation of true and apparent dip Calculating rake and plunge of lineation Three-point problems Plotting geological map and outcrop completion Flow Nets. Problems on permeability, porosity and rate of flow. Water table contour map and its application

#### **Evaluation and Assessment: SGE00401, 402, 403 courses**

#### **Evaluation (Theory): Total marks per course - 100.**

#### CIA- 40 marks

CIA 1: Written test -20 marks

CIA 2: Fieldwork -20 marks

(This will be for all the three courses, that is 20 marks each, 3 days outside Mumbai City)

#### **End Semester Examination – 60 marks**

One question from each unit for 20 marks, with internal choice. Total marks per question with choice -28 to 30.

#### **Evaluation (Practicals) Total marks for Practical course - 150.**

#### \*\*\*\*\*\*

## Syllabus For B.Sc V<sup>th</sup> Semester Courses in Geology (June 2019 onwards)

- Contents:
- Theory Syllabus for Courses:
  - SGEO0501 Precambrian Geology of India
  - o SGEO0502 Igneous Petrology
  - o SGEO0503 Structural Geology
  - SGEO0504 Metamorphic Petrology
  - SGEO05AC- Remote Sensing and Image Interpretation
- Practical Course Syllabus for: SGE005PR and SGE005ACPR
- Evaluation and Assessment guidelines.

#### **Learning Objectives:** 1. To bring about an understanding of the principals of Stratigraphy. 2. Understand the Precambrian Stratigraphy of India. Number of lectures: 60 Unit 1 Introduction (15 lectures) Earth's Crustal Structure and Tectonic framework of India- Cratons. Tectonic Elements of Continents & Oceans. Tectonic Divisions of India. Indian Cratons: Dharwar Craton. Bastar Craton. Aravalli Craton Unit 2 **Cratons and Mobile Belts** Singhbhum Craton Proterozoic Eastern Ghat Mobile Belt Marginal & Transition Zone Western Charnockite Zone Western & Eastern Khondalite Zone. Satpura Mobile Belt Central Indian Tectonic Zone- Sausar, Mahakoshal & Betul Supracrustal Belts

#### Unit 3

T.Y. B.Sc. Geology

**Title: Precambrian Geology of India** 

#### Proterozoic History **Proterozoic Sedimentary Basins:** Vindhyan Basin, Delhi Basin Cuddapah & Kurnool Basins. Kaladgi Basin.

#### Unit 4

#### **Precambrians of Extra – Peninsula**

Precambrian of Himalaya (Lesser & Higher Himalayas) Precambrian of the Tethyan Basement Salkhala Group Vaikrita Group Jutogh Group **Daling Group** Precambrians of the Lesser Himalaya Western Sector **Central Sector** Eastern Himalaya

(15 lectures)

- 9. Krishnan, M.S. (1982) Geology of India and Burma; 6<sup>th</sup> Ed. CBS Publishers & Distributors (India).

#### **Practical:**

#### Stratigraphy and Geology of India

- I) Study of common rocks and economic minerals in Hand specimen from different stratigraphic horizons.
- II) Diagrammatic examples of Lithostratigraphic boundaries and classification.
- III) Study of Geological maps with geological history of the area in chronological order.
- IV) Problems:
  - a) Stratigraphic sequence from geological section.
  - b) Characteristics of a Fold & Fault from a geological map.
  - c) Understanding Precambrian Geological Time Scale.
- V) Numericals on radiometric dating- U-Pb, Rb-Sr, K-Ar
- VI) Numericals on stable isotopes- Oxygen and Carbon.

#### T.Y. B.Sc. Geology Title: Igneous Petrology

#### Learning objective:

To provide students a systematic approach in understanding the origin of igneous rocks, nomenclature, classification and their association with particular tectonic settings.

#### Number of lectures: 60

#### Unit-1

#### The Interior of the Earth:

Evidence of the Earth's Composition and Mineralogy: Seismic data, The Geothermal Gradient, Meteorites, Xenoliths.

Mantle Petrology; Low Velocity Zone, Pressure and Temperature variations with Depth and high pressure experimentation.

#### **Classification and Description of Igneous Rocks:**

The IUGS Classification System, Other aspects of classification; Chemical Classification; **Textures of Igneous rocks**,

Crystallinity, Granularity, Shape of Crystals and Mutual Relations.

Equigranular, Inequigranular, Directive and Intergrowth Textures.

Terms related to some specific Textures and Microstructures : Perlitic Cracks, Spherulites, Orbicular Structure, Rapakivi Structure, Zoned Crystals, Xenocrysts, Quench Texture, Crystal Pseudomorph, and Cumulus Crystals.

Characters of the Common Igneous Rocks: Plutonic and Volcanic types; Examples of Common Igneous Rock Types and their Indian Occurrences.

#### Unit 2

#### (15 lectures)

(15 lectures)

### The Phase Rule and crystallization and melting relations in one, two and three component Systems:

Melting Behavior of Natural Magmas, Phase Equilibrium and The Phase Rule, One Component Systems, Two Component (Binary Systems) and Its Petrogenetic Significance. Binary Systems with Complete Solid Solution, Binary Eutectic Systems, Binary Peritectic Systems, the Alkali Feldspar System,

Ternary Systems:- Ternary Eutectic Systems, Ternary Systems with Solid Solution Reaction Series, The Effect of Pressure and Fluid on Melting Behavior. The effects of Pressure on the Melting and Crystallization of Magma; Time and Crystallization; Rock Types and Mode of Occurrence.

#### Unit 3

#### The Evolution of Magmas:

Differentiation: Fractional Crystallization; Other Differentiation Mechanisms. Magmatic Mixing and Assimilation.

Melting of the Mantle, Partial Melting, Magma Generation and Differentiation. Generation of Basaltic magma from a Chemically Uniform Mantle.

#### Unit 4

#### (15 lectures)

(15 lectures)

Brief study of Plate tectonic settings and associated igneous rocks.

#### Course: SGE00502

Subduction –Related Activity: Island Arc Volcanism, Rocks and Magma Series, The Ophiolite Suite; Calcalkaline and Tholeiite Groups; Petrogenesis of Island Arc Magmas, Plutonic Rocks – Batholiths related to subduction zones.

Gabbroic Layered Intrusions; Anorthosites; Alkali Basalts and Nephelinites; Carbonatites, Kimberlites and related Rocks.

10. Philpotts A. R. (2009), Petrography of Igneous and Metamorphic Rocks, Cambridge University Press, 686p.

#### **Practical Course:**

#### Megascopic identification and Petrography of Igneous Rocks

#### Igneous Textures.

Equigranular:

- a. Coarse –grained, Holocrystalline, Panidomorphic.
- b. Coarse –grained, Holocrystalline, Hypidiomorphic
- c. Medium -grained, Holocrystalline, Hypidiomorphic
- d. Fine -grained, Holocrystalline, Panidomorphic. (Orthophyric)
- e. Fine -grained, Holo/ Hemicrystalline, Hypidiomorphic
- f. Fine-grained, Holocrystalline, Allotriomorphic (Aplitic)
- g. Fine- grained, Hemicrystalline, Aphanitic, (Felsitic)
- h. Fine –grained, Holohyaline, Aphanitic Inequigranular:
- a. Coarse/Medium/Fine, Holo/Hemicrystalline, Porphyritic
- b. Coarse/Medium/Fine, Holo/Hemicrystalline, Glomeroporphyritic
- c. Coarse/Medium, Holo/Hemicrystalline, Ophitic/ Subophitic
- d. Medium/ Fine, Holo/Hemicrystalline, Poikilitic
- e. Medium/Fine, Holocrystalline, Intergranular
- f. Medium/Fine, Hemicrystalline, Intersertal
- g. Medium/Fine, Intergranular-cum-ophitic (Ophimottling) Directive:
- a. Fine, Hemicrystalline/Holohyaline, Banded (Fluidal)
- b. Fine, Hemicrystalline, Trachytic Intergrowth:
- a. Graphic/Micrographic
- b. Perthitic

c. Granophyric

# **Igneous Mega-Structures**

- 1. Vesicular/ Amygdaloidal Lava
- 2. Blockery/ Clinkery Lava
- 3. Ropy Lava Surface
- 4. Columnar Joint Block
- 5. Flow Banding
- 6. Glomeroporphyritic Clustures
- 7. Intrusive Contacts and Xenoliths

# **Igneous Micro-Structures**

- 1. Reaction: (a. Corona, b. Myrmekite)
- 2. Xenolithic
- 3. Spherulitic/ Variolitic
- 4. Perlitic Fracture

# Study of the Texture, Mineral composition, Mode of occurrence, and Association of the following Rock Types.

- 1. Granite
- 2. Rhyolite
- 3. Pegmatite
- 4. Aplite
- 5. Quartz porphyry
- 6. Pitchstone
- 7. Obsidian
- 8. Syenite (Hornblende / Biotite)
- 9. Trachyte
- 10. Feldspar porphyry
- 11. Nepheline Syenite
- 12. Diorite
- 13. Gabbro
- 14. Norite
- 15. Dolerite
- 16. Basalt (Vesicular/ Non- Vesicular/ Porphyritic, Amygdaloidal)
- 17. Picrite
- 18. Peridotite
- 19. Dunite
- 20. Anorthosite
- 21. Carbonatite

# T.Y.B.Sc Geology Title: Structural Geology Learning Objectives:

#### **Course: SGE00503**

To understand the concept of stress and strain and how rock behaves under different stress regimes. A detailed study of various geological structures i.e. Joints, Folds and Faults **Recommended:** Personal laptop Computer with Stereo Plotting software

Number of lectures: 60 Unit 1 (15 lectures) Introduction, Types of Structures, Stress, Strain, Measurements of Stress and Strain, **Mechanical Behaviour of Rocks** Introduction and Review Structures and Structural Geology **Fundamental Concepts** Stress Definitions Stress on a Plane Stress at a Point Mohr Construction Mohr's Hypothesis Stress Ellipsoid Strain Definitions Kinds of Strain Strain Ellipsoid Mohr Circles for Strain Simple and Pure Shear Measurement of Strain in Rocks Kinds of Strain Strain Markers Flinn Diagram Mechanical Behavior of Rock Materials Elastic (Hooken) Behavior Permanent Deformation – Ductility **Controlling Factors** (15 lectures) Unit 2 **Study of Structures I: Joints and Faults** Joints and Shear Fractures Griffith and Coulomb theory of fractures

Fault Classification and Terminology Anatomy of Faults Criteria for Faulting Fault Mechanics Anderson's Fault Types Brittle versus Ductile Faults Thrust Faults

Joints and Fracture Mechanics

Classification of joints

Nature of Thrust Faults Detachment within a Sedimentary Sequence Small – Scale Features of Thrust Sheets Strike - Slip Faults Properties and Geometry Environments of Strike - Slip Faulting Fault Geometry and Other Fault Types Termination of Strike - Slip Faults Transforms Normal Faults Properties and Geometry Unit 3 **Study of Structures II: Folds-I** Fold Geometry and Classifications Descriptive Anatomy of Simple Folds Map – Scale Parallel Folds and Similar Folds **Recognition of Folds** Fold Classifications Based on interlimb angle Ramsay standard classification Noncylindrical and Sheath Folds Fundamentals of Parallel Folds and Similar Folds **Complex Folds** Identification of overturned folds Occurrence and Recognition Fold Interference Patterns **Recognition of Multiple Fold Phases** 

# <u>Unit 4</u>.

# Study of Structures II: Folds-II

Fold Mechanics
Fold Mechanisms and Accompanying Phenomena
Deformation Mechanisms and Strain
Theory of progressive evolution of fold shapes in single competent layers.
Layer parallel shortening
Dependence of fold shape on viscosity contrast in a single layer buckles
High competence contrast, Low Competence contrast
Zone of contact strain and its interrelationship with buckle folds
Change of fold shape with packing distance of competent layers
Fold styles in multilayers

- 7. Ramsay J.G. and Huber M.I. (2002), The Techniques of modern structural geology, 2<sup>nd</sup> ed., Vol. 2, Elsevier Science Ltd.

#### **Practical Course:**

- Profiles and cross sections of geological maps with showing various structural features: folds, faults, dykes, two series of dipping beds. (8 maps at least)
- Patterns of dipping strata;
- Stress and strain analysis- applications
- Equal-area net part I
- a. Plotting a line that lies in a plane
- b. Determining the angle between two lines
- c. True strike and Dip from apparent dips
- d. Attitude of intersection of two planes

# • Equal-area net part II

- a. Determining the angle between two planes
- b. Determining the orthographic projection of a line on a plane
- c. Determining the angle between a line and a plane
- d. Bisecting the angle between two lines
- e. Bisecting the angle between two planes
- Counting and contouring of the structural data

# T.Y. B.Sc. Geology Title: Metamorphic Petrology.

#### Learning Objectives:

As a branch of petrology, metamorphic petrology deals with the change in rock structure, composition and texture based on the varying pressure and temperature conditions. This course aims at preparing the learner for appreciating the processes that lead to such changes. The learner will be able to identify in hand specimen as well as through petrographic examination, the various rocks.

#### Number of lectures: 60

Unit 1: Introduction to Metamorphic Petrology Definition of metamorphism. Agents of metamorphism Types of Metamorphism Introduction to metamorphic fluids Metasomatism and examples of metasomatism Classification of Metamorphic rocks Textures and structures of metamorphic rocks	(15 lectures)
Unit 2: Thermodynamics and metamorphism Phase rule and phase diagrams Calculations on entropy, enthalpy, Gibbs free energy Introduction to chemographic projections Types of metamorphic reactions Concept of metamorphic facies	(15 lectures)
Unit 3: Metamorphism- types and products-I Metamorphism of basic rocks and their facies UHP and UHT metamorphism of basic rocks Introduction to P-T-t paths Metamorphism of pelitic rocks- Barrovian zones Partial melting and migmatites	(15 lectures)
Unit 4: lectures) Metamorphism- types and products-II Metamorphism of carbonate rocks- Contact and regional Charnockites and Khondalites-Granulites with reference to Indian example Porphyroblasts and Tectonism: pre-, syn- and post- tectonic porphyroblast	

Introduction to paired metamorphic belts

#### **Practical Course:**

#### Calculations of stable mineral composition at equilibrium

#### Megascopic and Microscopic Identification of Metamorphic Rocks.

#### **Metamorphic Textures**

- 1. Idioblastic
- 2. Porphyroblastic
- 3. Granuloblastic
- 4. Xenoblastic

#### Metamorphic Structures

- 1. Cataclastic
- 2. Slaty cleavage
- 3. Maculose
- 4. Granulose
- 5. Schistose
- 6. Gneissose

#### **Metamorphic Rocks**

- 1. Quartzite
- 2. Marble
- 3. Slate
- 4. Phyllite

- 5. Mica Schist (with Staurolite/ Garnet)
- 6. Actinolite/ Chlorite Schist
- 7. Mica- Gneiss
- 8. Hornblende Gneiss.
- 9. Granulite
- 10. Eclogite
- 11. Serpentinite
- 12. Khondolite
- 13. Charnockite

#### SGE00501, 502, 503, 504 courses

#### **Evaluation (Theory): Total marks per course - 100.**

# CIA- 40 marks

CIA 1: Written test -20 marks

CIA 2: Assignment -20 marks (Pre field report: This will be for all the four courses, that is 20 marks each,)

#### **End Semester Examination – 60 marks**

One question from each unit for 15 marks, with internal choice. Total marks per question with choice -20 to 22.

#### **Evaluation of SGEO05PR (Practicals) Total marks per Practical course - 200.**

# T.Y. B.Sc. Geology Title: Remote Sensing and Image Interpretation

# **PRE-REQUESITES:** Courses S.Geo.1.0 and S.Geo.2.0 Additional Requirements: Personal laptop Computer.

#### **Learning Objectives:**

Gathering data about various earth surface features through space and air borne sensors has been effectively used for understanding and analyzing various phenomenon ranging from vegetation , agriculture, natural resources mapping and exploitation to environment monitoring. Remote sensing is today an integral part of any study that needs inputs in the form of spatial and spectral reflectance of earth's surface characteristics. This course, aimed at all learners with a background in the earth sciences, will develop skills in understanding how the satellite image date is acquired and interpreted. The use of printed satellite imageries as well as data in digital form will result in the learner also developing the necessary competence in automated classification of satellite image data.

#### Number of lectures: 60

# <u>Unit 1</u>

#### **Concepts of Remote Sensing**

Concepts and Foundations of Remote Sensing

Definition of Remote Sensing.

Energy Sources and Radiation Principles.

Energy interactions in the Atmosphere: Scattering, Absorption.

Energy interactions with earth surface features: Spectral Reflectance of Vegetation, Soil and Water, Spectral response patterns, Atmospheric Influences on Spectral Response Patterns. Brief history of Remote Sensing from the advent of photography till today's aerial and space-based remote sensing systems.

The concept of resolution: Spatial, Spectral, Temporal and Radiometric.

#### <u>Unit 2</u>

#### **Satellite Sensors and Data**

Space Borne Imaging Systems- The Landsat, IRS, SPOT and High resolution Land Satellites (the characteristics of these satellites- their orbits, their sensors, and their resolutions) Multispectral, Thermal and Hyper spectral Sensing

Across track scanning.

Along track scanning.

Operating principles of Across track Multispectral Scanners.

Across track Thermal scanning.

Thermal Radiation principles.

#### Unit 3

# Introduction to Digital Image Processing and Classification Introduction. Image Rectification and Restoration. Image Enhancement. Contrast Manipulation. Spatial Feature Manipulation.

Course: SGEO05AC

#### (15 lectures)

# (15 lectures)

Multi-Image Manipulation.

Image Classification: Supervised Classification: Minimum-Distance to Means Classifier, Parallelepiped Classifier, Gaussian Maximum Likelihood Classifier.

# <u>Unit 4</u>

# **Digital Imaging classification**

Unsupervised Classification.

Classification Accuracy Assessment.

**Applictions of Remote Sensing:** 

Recognising Rock types, geological structures

Mapping vegetation.

# **Practical Course:**

# **Remote Sensing and Image Processing**

- Interpretation of Satellite Imagery for landforms, geological structures, rock and soil types, man made structures.
- Data Products and Meta data
- Digital Image Processing (using number matrix): enhancement, manipulation and classification.
- Digital image processing on Computer (using QGIS)
  - Display of various types of image formats
  - Pallets and Display elements
  - Georeferencing
  - Image enhancement
  - Image classification
  - Vegetation Indexing NDVI

# Syllabus for B.Sc VI<sup>th</sup> Semester Courses in Geology (November 2019 onwards)

Contents:

- Theory Syllabus for Courses:
  - SGEO0601 Phanerozoic Geology of India
  - o SGEO0602 Sedimentary Petrology
  - SGEO0603 Engineering Geology
  - SGEO0604 Photogrammetry, Photo Interpretation & Fundamentals of GIS
  - SGEO06AC- Gemmology
- Practical Course Syllabus for SGEO06PR
- Practical Course Syllabus for SGEO06ACPR
- Evaluation and Assessment guidelines.

#### T.Y. B.Sc. Geology **Title: Phanerozoic Geology of India**

Learning Objectives: To bring about an understanding of the principals of stratigraphy and Understand the Phanerozoic stratigraphy of India.

<u>Unit 1:</u>	(15
lectures)	
Palaeozoic History	
Tectonic History	
Precambrian Cambrian Boundary	
Marine Palaeozoic Formations of India	
Kashmir Basin	
Spiti Basin	
Krol Basin	
<u>Unit 2:</u>	(15
lectures)	
Mesozoic History	
Tectonic History	
Permian Triassic Boundary	
Marine Mesozoic Formations of India - Spiti Basin	
Marine Transgressive Sequences of Kachchh, Jaisalmer and Tiruchirapalli.	
<u>Unit 3:</u>	(15
lectures)	
Gondwana Sequence of India	
Sedimentation and Palaeoclimates	

Lower Gondwana Sequence of different basins. Upper Gondwana Sequence of different basins.

Unit 4: lectures) **Cenozoic History Tectonic History Boundary Problems** Indian Palaeogene - Neogene Formations: Siwalik Supergroup Assam – Arakan Region Andaman-Nicobar Islands Sirmur Group Timeline of evolution of Himalayan orogenic belt Geology and Stratigraphy of Maharashtra Deccan Flood Basalts. Geology of Mumbai and Suburbs

5

**Course: SGEO0601**

- 10. Wadia, D.N. (1984) Geology of India, 4<sup>th</sup> ed., Tata McGraw-Hill Publishing, New York.

#### **Practical Course:**

# Stratigraphy and Geology of India, Maharashtra and Mumbai

- I) Study of characteristic index fossils of a particular stratigraphic horizon.
- II) Biostratigraphic correlation exercises
- III) Lithostratigraphy and stable isotope composition of phanerozoic carbonate sequences
- IV) Isopach, Isolith and structural contour maps
- V)  $^{14}$ C dating and OSL dating- principals and numericals
- VI) Study of Geological maps with geological history of the area in chronological order.
- VII) Problems:
  - d) Stratigraphic sequence from geological section.
  - e) Interpretation of depositional environments for stratigraphic sequences.
  - f) Understanding Phanerozoic Time Scale.

# T.Y B.Sc. Geology

#### **Course: SGEO0602**

# **Title: Sedimentary Petrology**

# Learning Objectives:

To understand the various provenances, processes of formation and environments of deposition of sedimentary rocks.

Number of Lectures - 60	
<u>Unit 1:</u>	(15 lectures)
Introduction	
Origin, transportation and deposition of sediments.	
Classification of Sedimentary rocks	
Basin, environment and facies concept.	
Field techniques:	
Sedimentary structures- Basic measurements and data records	
Sedimentary Texture analysis:	
Grain Size scales and laboratory methods of analysis	
Shape analysis	
<u>Unit 2:</u>	(15 lectures)
Siliciclastic sedimentary rocks	(
Sandstones	
Field observations	
Petrography and classification	
Heavy minerals and other provenance indicators	
Concept of maturity	
Diagenesis and authigenesis	
Conglomerates and breccia	
Classification and field observations	
Mudrocks:	
Field Observations: Textures, Structures, Colour, Nomenclature	
Laboratory Studies: Mineral composition and provenance.	
J 1 1	
Unit 3:	(15 lectures)
Limestones and dolomites	· · · ·
Field Observations	
Components and mineralogy of limestones	
Classification of limestones and petrography	
Carbonate diagenesis	
Dolomitization and dedolomitization	
Silicification of limestone	
Carbonate depositional environments	
Caroonale acpositional environments	
<u>Unit 4:</u>	(15 lectures)
Other Types of Sedimentary Rocks:	(,
Evaporites-	
Origin of Giant Evaporite Deposits	
Palaeoclimatic interpretation from evaporites	
<b>Bedded Cherts and Phosphate Rocks-</b> Origin, mineralogy and types	
Ville in the second sec	

Volcaniclastic sediments- Types and field characters.

- 6. Tucker, M. E (2001), Sedimentary Petrology (3<sup>rd</sup> Edition), Blackwell Science Ltd. Unwin Hyman Ltd, Sydney.

\*\*\*\*\*\*\*

#### **Practical Course**

# Megascopic and Microscopic description of Sedimentary Rocks. Sedimentary Structures

- 1. Parallel bedding
- 2. Current Bedding
- 3. Graded Bedding
- 4. Ripple Marks
- 5. Rain Imprints
- 6. Concretions/Secretions

Grain size and shape analysis

Preparation of lithologs and sections

**Paleocurrent analysis** 

Identification and description of heavy minerals

# T.Y. B.Sc. Geology Title: Engineering Geology

**Learning Objectives:** To understand the engineering properties of rocks and their use as construction material. Detailed study of various geological and geotechnical investigations for various civil engineering projects. To understand the impact of Geological activities on the environment.

### Number of lectures: 60

# <u>Unit 1:</u>

# **Engineering Properties of Rocks:**

Specific Gravity Porosity Sorption Compressive Strength Tensile Strength Elasticity of Rocks Residual Stress and Shear Stress in Rocks.

# **Engineering properties of soil**

Soil classification Soil gradation Compressive and shear strength Atterberg limits Consolidation and swelling of clays

# <u>Unit 2</u>:

#### **Rocks as Construction Materials:**

**Types of Rocks used in construction:** How are they obtained in nature? Use of Rocks as facing stone. Factors influencing Engineering usefulness of Rocks. **Use of Rocks as aggregates:** Use of rock as an aggregate in different types of constructions, sources of different grades of aggregates. Properties of aggregates (Shape, Size, Surface Texture, Roundness, Coating), Cement aggregate reaction, Thermal effects on aggregate. Highway aggregate, Rail – road ballast, Runway aggregate.

### Source of Rock aggregate:

Types of quarries, Exploration for quarries, processing of aggregates. Source of sand and gravel

#### **Unit 3:**

# **Geological and Geotechnical investigations for Civil Engineering Projects:**

**Tunnels:** Terminology, Geological conditions for tunnel sites, Tunnels in folded rocks and bedded rocks. Influence of divisional planes, Effects of faults, Crushed zones, Tunnels near slopes, Role of Groundwater in tunneling.

Landslides: Causes, types and prevention of landslides. Influence of divisional planes, effects of faults, Crushed zones.

Bridges: Classification, abutments, foundations, investigations for site selection.

1

# Course: SGEO0603

(15 lectures)

15 lectures)

### <u>Unit 4</u>

# (15 lectures)

# Geological and Geotechnical investigations for Civil Engineering Projects:

**Dams and Reservoirs:** Geological conditions for the selection of dam and reservoir sites. Terminology associated with dams. Types of dams: Masonary Dams (Gravity Buttress and Arch types), Earthen dams. Types of spillways.

Case studies of the important dams and Hydro – electric projects in India- (Koyna, Bhakra-Nangal, Idukki, Tehri, Sardar Sarovar, Kadana)

### Dam failures-causes and case studies.

10. Gokhale K.V.G.K and Rao D.M. (1981), Experiments in Engineering Geology. Tata McGraw-Hill.

#### **Practical Course:**

#### **Engineering Geology**

- Geological maps to demarcate and evaluate the suitability of sites for engineering projects such as Tunnels, Dams and Reservoir construction.
- Determining uniaxial compressive strength of rocks.
- Equal-area net
- a) Locus of rotating line
- b) Determining core-pole angle and orientation of plane in recovered core
- c) Determining slope stability
- d) Determining orientation of bed in rotational fault

#### T.Y. B.Sc. Geology Course: SGEO0604 Title: Photogrammetry, Aerial Photo Interpretation and Fundamentals of Geographical Information Systems

#### Learning Objectives:

1.To bring about an understanding of the principles of Photogrammetry and about the various analytical techniques used. To understand the construction and working of various instruments used in the process of aerial photo interpretation

2.Understand the principles of GIS and study its application in Earth Sciences.

# Number of lectures: 60

#### Unit 1

# **Principles of Aerial Photography**

Early history of aerial photography;

Aerial cameras, Film resolution.

Electronic Imaging, Aerial Videography.

Basic Geometric Characteristics of Aerial Photographs: Geometric types of Aerial Photographs, Taking Vertical Aerial Photographs, Geometric Elements of Vertical Photograph.

Photographic Scale.

Ground Coverage of Aerial Photographs.

Area Measurement on aerial photographs.

#### Unit 2

# **Principles of Photogrammetry:**

Relief Displacement of Vertical Features in aerial photographs.

Characteristics of Relief Displacement,

Object height determination from Relief Displacement Measurement.

Correction for Relief Displacement.

Image Parallax: Characteristics of Image Parallax, Parallax Measurement.

Ground Control for Aerial Photography.

Mapping with Aerial Photographs: Stereoscopic Plotting Instruments, Orthophotos, Photogrammetric Work Stations.

Flight Planning.

# <u>Unit 3</u>

# **Aerial** Photo Interpretation:

Fundamentals of Visual Image Interpretation.

Basic Visual Image Interpretation Equipment- Construction and Working.

Land-use/Land cover mapping.

Geologic and Soil mapping.

Water Resource Applications.

Archaeological Applications.

Environmental Assessment

Principles of Landform Identification.

#### <u>Unit 4</u>

**Basics of Geographical Information Systems** Definitions of GIS (15 lectures)

#### (15 lectures)

(15 lectures)

The components of a geographical information system.

Basic requirements for a GIS.

Data Models: Conceptual models of real world geographical phenomena.

Conceptual models of space.

Geographical Data models: Vector models of Entities – Simple points, lines and polygons.

Raster Data Structures-The grid Cell Data Types: Boolean, Nominal, Ordinal, Integer, Real, Topological. Data Input: Sources of Geographical Data, Geographical data Collectors and providers.

Geo-referencing.

# **Practical Course:**

- Test and Exercise for Stereoscopic vision
- Determination of Photo Scale and numerical problems on photo scale.
- Orientation of Stereographic pair of aerial photographs under a mirror stereoscope and point transfer. Plotting of principal point, flight line and match line.
- Construction of stereogram
- Handling of a parallax bar and height calculation
- Numerical problems on height calculation using measured relief displacement on a single aerial photograph.
- Flight Planning: Calculations necessary to develop a flight plan and draw a flight map.
- Interpretation of aerial photographs: various landforms, erosion types, horizontally bedded sandstones, shale and limestone. Intrusive igneous rocks, extrusive (lava flows). Aeolian Landforms: transverse sand dunes, longitudinal sand dunes, loess. Glacial landforms: end moraine, basal moraine, drumlins, eskers. Fluvial Landforms: alluvial fans, deltas. Coastal landforms: beach ridges, beach cusps, dunes, surface expressions of anthropogenic activities.

#### Evaluation and Assessment : SGEO0601, 602, 603, 604 courses

#### **Evaluation (Theory): Total marks per course - 100.**

#### T.Y. B.Sc. Geology Title: Gemmology

#### Learning Objectives:

To study and understand the evolution of gemstones and gem materials

#### **PREREQUISITE : Courses SGE003 and SGE004**

#### Number of lectures: 60

<u>Unit 1</u> lectures)

#### The Geological Sources of Gems

Rocks and processes that formed them.

Gem regions. Gem recovery methods

Cryptocrystalline, massive and metamict states

Hardness: definition, Mohs' scale, Cleavage: definition, description, importance in germology and lapidary work

Specific Gravity: Definition, Heavy liquids (bromoform, methylene iodide, sodium polytungstate and Clerici solution)

Luminescence: Fluorescence and phosphorescence, photoluminescence and Stoke's law,

Thermal conductivity and thermal conductivity meter, 10 X lens, Chelsea colour filter

#### <u>Unit 2</u>

#### lectures)

**Optical Properties** 

Nature of colour: absorption of light, allochromatism, idiochromatism

Lustre, sheen, chatoyancy and asterism in gemstones, play of colour, dispersion, metamerism, use of, cross filter test.

Polarization and absorption of light

Nature and production of polarized light, design and construction of polariscope and its use in gemmology. Differential absorption of light, pleochroism, dichroscope, construction and use; Spectroscope – construction and use, absorption spectra,

Reflection: laws of reflection, importance in gemmology.

Refraction: laws of refraction, refractive index, total internal reflection, use and design of refractometer, measurement of R.I. and birefringence by refractometer and other methods. Isotropism and Anistropism in gemstones, anomalous double refraction, optic axes

#### Unit 3

#### lectures)

#### **Fashioning of gemstones**

Cutting styles, critical angle, composite stones, gemstone polishing, lapidary techniques and gemstone carving.

Diamonds: Diamond cutting and polishing methods, diamond grading including cut, colour, clarity and carat weight.

Diamond synthesis, thin diamond films, chemical vapour deposition (CVD)

Gemstone simulants: Glass, plastics, diamond simulants, assembled or composite stones Metric carat, pearl grain, kilogram, gram, milligram, meter, millimeter, micrometer, nanometer, Angstrom, litre, milliliter

#### Course SGEO060AC

(15

(15

(15

#### <u>Unit 4</u>

# lectures)

#### Gemstone synthesis and treatments

Methods of staining, heat treatment, diffusion treatment, fracture filling, cavity filling, coatings, dyeing, laser drilling, atomic irradiation and their detection Synthesis of gemstones:

Methods of manufacture: flame-fusion (Vernueil), flux-melt, hydrothermal, crystal-pulling (Czochralski), skull-crucible method, zone melting.
